Appln. No.: Not Yet Assigned Preliminary Amendment dated February 10, 2005

## IN THE CLAIMS:

## Please amend the claims as follows:

- 1. (Amended) An apparatus for carrying a munitions container—(1), characterized in that as the carrying element a band (2)—is provided, that one end (10)—of the band is permanently connected with the munitions container (1)—and that the munitions container (1)—has several detent positions (5; 9)—into which the other end (11)—of the band (12)—is dentably insertable to provide for an adjustment of a variable and usable for carrying free band length.
- 2. (Amended) An apparatus according to claim 1, further characterized in that a preferably cylindrical detent bar (3) is connected to the loose end (11) of the band (2), which detent bar is detentably insertable into a detent position (5; 9) of the munitions container (11) which detent position has a contour conforming to that of the detent bar (3).
- 3. (Amended) An apparatus according to claim 1-or-2, further characterized in that the permanently fixed end (10)-of the band (2)-is arranged on one container half outer side (12)-and the detent positions (5; 9)-into which the toggle bar (3)-arranged on the free end (11)-of the band (2)-is insertable are located on the outer side (13)-of the other container half.
- 4. (Amended) An apparatus according to claim 1-or 2 further characterized in that the detent positions (5; 9)-are so arranged on a container half-(13), that at the opposite end of the outer side (12) from the permanent band connection an opening (14)-for the band (2)-begins and proceeds through both container halfs (12; 13)-so that the band (2)-is variably detentably insertable into the different detent positions (5; 9).
- 5. (Amended) An apparatus according to ene of claims 1-4 claim 1 further characterized in that band (2) is arranged in recesses (6; 7) on the outer side of each container half (12; 13).

Appln. No.: Not Yet Assigned Preliminary Amendment dated February 10, 2005

- 6. (Amended) An apparatus according to one of claims 1-5 claim 1 further characterized in that the recesses (6; 7) have gripping depressions (8) for the gripping of the band (2).
- 7. (Amended) An apparatus according to ene of claims 1-6 claim 1 further characterized that for a completely inwardly drawn band 2 the toggle bar 3 is detentably insertable into a further detent position-(4).
- 8. (Amended) An apparatus according to one of claims 1-7 claim 1 further characterized in that the band (2) is preferably a flat textile band.
- 9. An apparatus according to ene of claims 1-8-claim 1 further characterized in that a band (2) is arranged in the longitudinal direction on the container halfs (12; 13) and in the transport position (15)-forms a loop-(16), the axial span length of which loop corresponds nearly to the total container length.
